Term	Definition	Spanish
Linear Combination <i>Section 7.3</i>	One method for solving a system of equations. In this method, the equations are combined by adding or subtracting them to eliminate one of the represented variables. One or both of the equations may need to be multiplied by a scalar before this will work.	combinación lineal
Substitution <i>Section 7.2</i>	One method for solving a system of equations. In this method, one variable is solved for one equation and then substituted (replaced) into the other equation in the system.	sustitución
System of Equations <i>Section 7.1</i>	When two or more equations work together to form a system. A system of equations can have 0, 1, or an infinite number of solutions.	el sistema de ecuaciones
System of Inequalities <i>Section 7.5</i>	A system of inequalities.	el sistema de desigualdades
